                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: May be involved in extracellular digestion.
CATALYTIC ACTIVITY: Specificity close to that of papain. As compared to cathepsin B, cathepsin L exhibits higher activity towards protein substrates, but has little activity on Z-Arg-Arg-NHMec, and no peptidyl-dipeptidase activity.
SUBCELULIAR ICCATION: Secreted.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY C1.
CAUTION: This protein may be non-functional as it lacks the cysteine active site residue which is replaced by Gly-118.

FUNCTION: MAY PLAY AN IMPORTANT ROLE IN THE SYNAPTIC FUNCTION SPECIFIC NEURONAL SYSTEMS. ASSOCIATES WITH PROTEINS INVOLVED VESICLE DOCKING AND MEMBRANE FUSION.

SUBCELLULAR LOCATION: COMPLEXED WITH MACROMOLECULAR ELEMENTS THE NERVE TERMINAL.

TISSUE SPECIFICITY: EXCLUSIVELY FOUND IN BRAIN AND GANGLIA. SIMILARITY: BELONGS TO THE SNAP-25 FAMILY.

SIMILARITY: Contains 2 t-SNAPE coiled-coil homology domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DROME

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
